What causes plants to wilt if they are not watered

November 9th, 2018 - Diffusion and Osmosis: Water moves through membranes by diffusion; this process is called osmosis. Like solutes, water moves down its concentration gradient. Water moves from areas of high concentration to areas of low concentration. Have students read the information about water potential and answer the following questions. You likely will have to guide students with insufficient water.

Pearson The Biology Place Prentice Hall

November 8th, 2018 - The processes of diffusion and osmosis account for much of the passive movement of molecules at the cellular level. In this laboratory, you will study some of the basic principles of molecular movement in solution and perform a series of activities to investigate these processes.
